### **DETAILED ACTION**

1. This application has been removed from allowance in order to consider the relevance of three prior art documents. The delay in making these rejections is regretted.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by "Fluid Load Cell Weight Classification Systems" (Research Disclosure Document). The research disclosure document shows a load cell including first and second rigid plate (2,3) with a fluid filled bladder (1) in-between, a pressure sensor (4), non compliant fastener means including a bolt (5), and a compliant fastener means including a spring in one embodiment. Although the first and second seat brackets are not shown, it is self-evident that the sensor is supposed to fit between the seat and the floor, so the sensor must inherently be located between the seat frame attachment bracket and the floor attachment bracket.

4. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Document RD 415020A "Fluid Load Cell for Motor Vehicle Seat Weight Classification For Tailoring Airbag Deployment".

5. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Document RD 415059A "Load Cell for Use in Vehicle Seat to Weight Occupant/content to Provide Classification For Tailoring Airbag Deployment".
